H/O. MULTIPLE SCLEROSIS.

MRI OF THE BRAIN WAS PERFORMED WITHOUT CONTRAST ENHANCEMENT

PROCEDURE: T1, T2 & FLAIR WEIGHTED MULTIPLANAR IMAGING.

Known case of multiple sclerosis.

As compared to MRI dated February 95, the lesion are more numerous in bilateral cerebral hemisphere with involvement of corpus callosum.

Lesion are also seen in the cerebellum and its middle peduncles with two small lesions in the posterior pons.

Ventricular system is normal.

No midline shift.

DR. UDAY D PATIL MD.,
CONSULTANT RADIOLOGIST.
